WRITING

The next hundred years are likely to be far worse than the last hundred years.

There is no doubt that in contemporary world there are a lot of global problems, such as overpopulation, ecological problems, etc. Some scientists believe that it was quite easy to bring about these problems. However, it will be very difficult to cope with them in the nearest future and in the future at all.

From my standpoint, considering the damage that people have made to nature, it will be extremely complicated to handle with such situation. For example, the most important ecological problem is ozone depletion, as ozone layer is the only protection for our planet. Thus, if this layer is completely destroyed, mankind will be likely to disappear.

However, some people reckon that human race is aware of it enough and, with help of modern technologies scientists will manage to improve the situation and save the Earth for future generations.

In conclusion, I personally believe that if people think of global problems now and try to cope with them, it will be much possible to save our planet.
